

## The 650W Hi-Infrared Bulb is Back!

650W hi-Infrared (hi-IR) bulbs were unavailable from GE for part of 2010, during which time most LENTRY Systems used a 750W halogen bulb instead (21,000 lumens). The original 650W hi-IR bulbs are again available, so we have immediately switched back. All LENTRY® System Lights will again utilize 650W Hi-IR bulbs instead of 750W bulbs. The two are interchangeable.

These special high efficiency bulbs offer more light with less energy (25,000 lumens using only 650 watts). This is an excellent power-to-output ratio, brighter than most 1000-watt bulbs and almost 2.5 times that of comparable 500W bulbs! It's many times brighter than comparable quality but more expensive LEDs. LENTRY Units with Dual Lights or the 2-Headed XT Light will again output 50,000 lumens using just 1300W of power.

This bulb change has no effect on the appearance, sizes or prices of LENTRY Light Systems. We will continue to offer the 750W bulb upon as a backup because it's less expensive as a spare part than the 650.

Please note that our website and sales literature are gradually being updated to reflect 650W lights again instead of 750W lights. Please don't hesitate to contact us with any questions.
