

## Safety Light Optional on New 20" GX160 Fan Light Discontinued on GX120s

The Safety Light is now optional on four VENTRY fans, including the 20GX160, shown here. This is a new 20-inch model with a Honda 4.8 hp GX160 engine. The light is no longer offered on models with 3.5 hp GX120 motors.

The Safety Light is self-contained, powered by a coil in specially equipped Honda GX160 and GX200 motors, and folds down when not in use, so it adds nothing to the fan's storage size.

Options available for each fan are listed on the VENTRY Fan Price List, available upon request.

The Point of Entry Safety Light is optional on a new 20-inch 5.5 hp VENTRY Fan shown here. Also visible in both pictures is the newly configured Wheels option which, on 20" VENTRY Fan models, now includes a telescoping vertical handle and stair skids. Regardless of the options you choose, 20" VENTRY Fans fit in 2- x 2- x 2-foot compartments with room to spare.
