

# Filtered Misting Ring

When the heat is too much, add a VENTRY<sup>®</sup> Misting Ring Kit to your fan. Keep your people cool and make sure a grain of sand doesn't ruin your day!

Used for fire fighter rehab, confined space, salvage and overhaul, sporting events, and more.

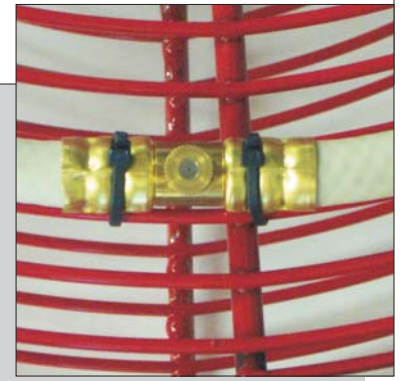

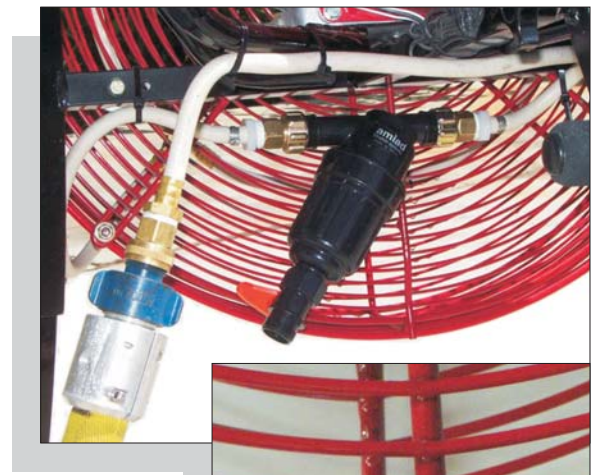

The Misting Ring works with a standard household water supply (garden hose) and, with the proper adaptors, can be connected to any water supply with max pressure of 150 psi.

A 22-micron water supply filter prevents clogging of misting nozzles which can otherwise occur due to particles carried in the water supply. The filter flushes with a simple turn of a valve.

Our low-pressure Misting Ring Kit can be added to any of our VENTRY Fan models and retrofits to any fan with a wire guard, regardless of manufacturer. If you already have a VENTRY Fan (or any fan with a wire guard), you can order the Misting Ring and easily install it yourself. All hardware is included.

*The filtered VENTRY Misting Ring Kit is shown at left, and above, installed on a 20-inch VENTRY Fan*

*The filter mounts on the back of the fan (above), clears with a turn of the valve, and prevents water supply impurities from clogging nozzles (right).*
